

# AT&T Virtual Profile

## QR Code Card

In today's fast-paced, ever-connected world, mobile technology has become an essential part of our businesses. As customers constantly strive for seamless, efficient, and secure connectivity, the eSIM (embedded SIM) QR Code Card is a game-changing innovation that's helping to revolutionize the mobile industry.

### What is a QR Code Card

An eSIM (embedded SIM) QR Code Card is a scannable virtual subscription identifier providing customers the ability to download an AT&T carrier profile onto an unconstrained eSIM-compatible device.

IoT devices are transforming to use eSIM technology: the use of physical SIMs in these devices are becoming obsolete, requiring customers to digitally download a carrier profile to these devices.

AT&T is at the forefront of this technology evolution offering this solution in conjunction with AT&T IoT connectivity management platform Control Center.

## Requirements

- Device must be Unconstrained (has a camera which can be used to scan the QR code)
- Device must have an LPA (device-based Local Profile Assistant) which manages the scanning of the code, extracts the required information from the code, and reaches out over the internet to download an AT&T profile from the SM-DP+
- Device must have access to Wi-Fi or cellular connectivity to download an AT&T profile

## How to Activate

1. **Ensure your device is eSIM-compatible:** eSIM technology is available in unconstrained devices that offer a camera and a user interface to download and enable the AT&T subscription Identifier.
2. **Order your QR Code Card:** Acquire your QR Card from AT&T Control Center or from an approved eUICC Manufacturer.
3. **Scan the QR code:** To activate your eSIM plan, simply follow your device's instructions for scanning and adding the QR subscription identifier.
4. **Confirm the activation:** Once the QR code has been scanned, your device will prompt you to confirm the activation of your new subscription identifier. Follow the on-screen instructions to complete the process.
5. **Network Activation:** All QR Card subscription identifiers are activation ready. Once downloaded your device will automatically connect with AT&T's IoT Mobile network.

## Availability

- QR Code Cards are available to all AT&T Industrial Customers.
- Orders can be placed via Control Center or via a Qualified eUICC Manufacturer. See your AT&T representative to add this ordering option to your Control Center Account.

### Supported AT&T IMSIs & SKUs

- 310-170 (6423d)
- 310-030 (6422d)

## Benefits

- Since eSIM profiles are stored digitally, they are less vulnerable to tampering or theft compared to physical SIM cards. This helps to reduce the likelihood of fraud and unauthorized access.
- The absence of a physical SIM card slot allows device manufacturers to create thinner and more compact devices with better water and dust resistance.
